

COMMUNITY AND ENTERPRISE EDITIONS

Available as both Free Open Source Software option and commercial Enterprise Edition, Open-Audit provides the targeted features needed to audit every environment.

DETAILED INVENTORY

No other IT auditing platform offers as detailed an inventory; grouping, collating, and translating data into easy to consume information.

SECURITY BASE LINE REPORTING

You are empowered to see what devices have changed, when the change occurred and (where possible) who made the change.

DATA EXPORT/IMPORT

Inventory data is readily exportable in a variety of formats including XML, CSV, JSON, HTML, plain text, etc. Importing and exporting data to and from other management systems is a simple task leveraging Open Audit's powerful open data import tools.

"What's on your network?"

Not sure what is on your network? Still using an Excel workbook to track devices and licensed products? You are not alone.

Save yourself time and effort with Open-Audit Enterprise (OAE), the commercially supported version of the hugely popular open source project, Open-Audit.

With a smoother front-end, better business-focused reporting, and expanded support for a wider range of devices, including AIX and ESXi. OAE is the only tool you'll want to audit your network.

Using the proven and powerful, agent-free framework, OAE will audit your network daily with no impact to the user experience. OAE's device discovery engine rapidly scans an organization's network and intelligently stores the configurations of every discovered component. A powerful reporting framework presents information such as software licensing, configuration changes, non-authorized devices, capacity utilization, and hardware warranty status (amongst others).

Integration has also been enabled to Opmantek's flagship product, NMIS, so gathering device information alongside performance statics and configuration data has never been easier.

OAE does not require a dedicated server, just a Windows or Linux machine to be installed to. It can even run on desktop versions of both Windows and Linux. A bundled Virtual Appliance, with Open-Audit Enterprise and NMIS, is also available for download via the Opmantek website.
