

Voted People's Choice for Systems Management in the 2015 American Business Awards

BUSINESS AWARE

Sophisticated business rules engine for managing all monitoring and notification policies and for ease of administration at a high level rather than on an individual device level.

VISIBLE OPERATIONAL IMPACT

Operations can see how device performance is impacting the health of the device, a group of devices and of the whole network.

AUTOMATED LIVE BASE LING

Measures a baseline of availability, response time and performance, and automatically shows the changes when compared to the previous period baseline

MASSIVELY SCALABLE

From the largest distributed global environments down to a single office implementation, NMIS handles the data, rules, and presentation.

REPORTING

Detailed historical data is archived and remains available for dynamic, on-demand reporting and graphing, over multiple periods.

NMIS monitors the status and performance of an organization's IT environment, assists in identification and rectification of faults, and provides valuable information for IT departments to plan infrastructure changes and investment.

First released in 1999, NMIS is the Network Management platform that underpins the operations of tens of thousands of organizations worldwide – making it one of the most widely used open source Network Management System in the world today.

NMIS has been implemented globally in networks from as little as 5 devices to hundreds of thousands of devices - from routers and wireless to storage and servers (any IT infrastructure).

Our developers continually update NMIS with input from the community and the core is, and will always remain, open source.

RECOMMENDED REQUIREMENTS:

UNDER 250 NODES	UNDER 1000 NODES
Dual core processor	Quad core processor
4Gb of RAM	8Gb of RAM
20Gb HDD	80Gb HDD
64 bit Linux (CentOS)	64 bit Linux (CentOS)
Apache	Apache

A preconfigured VM is available for download via the website.
