

### EXTREMELY FLEXIBLE

Supports many-to-one, and many-to-many architectures.

### MULTI TENNANCY

Removes the issues associated with overlapping IP address space and multiple security domains.

### CLEAR DATA

Deduplication of the polling and status information.

### FOLLOW THE SUN

Multi-Master capability allows slave pollers to report to multiple masters for multi-data center deployment.

### GEOGRAPHICAL DISTRIBUTION

Slave pollers may be sited locally to the NOC or on-site at the remote location.

### SECURE

Supports both push and pull of slave poller data to the Master.

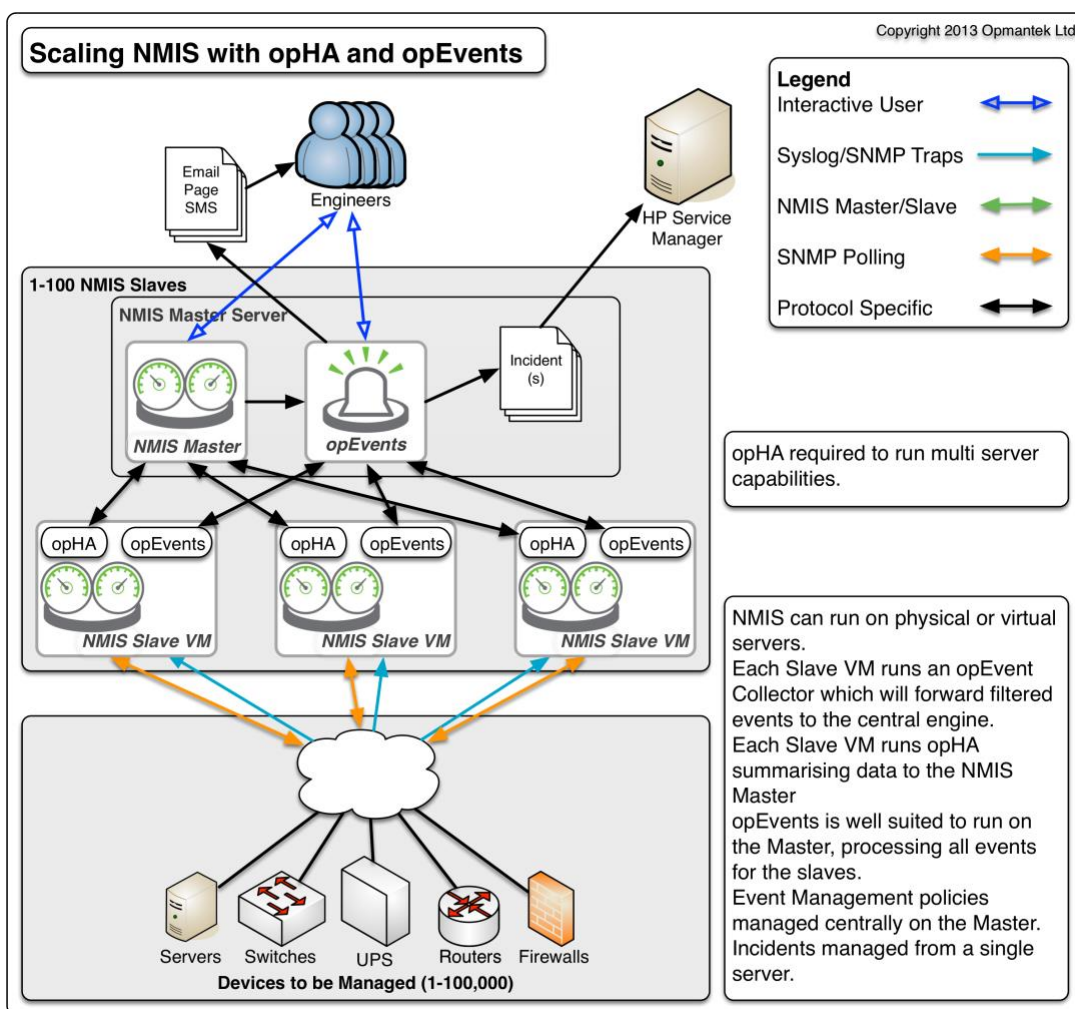

### API INTEGRATION

opHA incorporates JSON API's, which can be leveraged by third party systems for greater integration.

Expanding your network monitoring has never been easier!

Supporting both large, geographically disbursed clients and Managed Service Providers (MSP), Opmantek's opHA module distributes polling duties across multiple slave pollers allowing for infinite scalability.

opHA provides high availability, automated redundancy, master-slave functions, and geographic distribution of the management system enabling multi-customer functions/views in NMIS, opEvents, and opCharts.
